AQUATIC ANIMAL HEALTH REPORT - AUGUST 2005

CHAPTER 2.1.9.

INFECTIOUS SALMON ANAEMIA

Article 2.1.9.1.

For the purposes of this *Aquatic Code*, infectious salmon anaemia (ISA) means infection with ISA virus (ISAV) of the genus *Isavirus* of the family Orthomyxoviridae.

Methods for surveillance and diagnosis are provided in the *Aquatic Manual*.

Article 2.1.9.2.

Susceptible species

For the purposes of this *Aquatic Code*, *susceptible species* for ISA are: Atlantic salmon (*Salmo salar*), brown and sea trout (*S. trutta*), pollock (*Pollachius virens*) and cod (*Gadus morhua*).

Suspect cases of natural infection with ISAV in species other than those listed in this Article should be referred immediately to the appropriate OIE Reference Laboratory, whether or not clinical signs are associated with the findings.

Article 2.1.9.3.

Commodities

- 1. When authorising import or transit of the following *commodities*, *Competent Authorities* should not require any ISA related conditions, regardless of the ISA status of the *exporting country*, *zone* or *compartment*:
 - a) For the species in Article 2.1.9.2. for any purpose:
 - i) Commercially sterile canned fish;
 - ii) Leather made from fish skin;
 - b) The following products destined for human consumption¹ from species in Article 2.1.9.2 which have been prepared in such a way to minimise the risk of diversion for alternative uses:
 - i) Chemically preserved products (e.g. smoked, salted, pickled, marinated, etc ...);
 - ii) Heat treated products (e.g. ready prepared meals, fish oil);
 - iii) Eviscerated fish (chilled or frozen) packaged for direct retail trade;

¹ A Member Country may wish to consider the need to introduce internal measures to prevent the commodity being used for any other purpose than for human consumption.

- iv) Fillets or cutlets (chilled or frozen);
 - v) Dried eviscerated fish (including air dried, flame dried, sun dried);
 - c) For species other than those in Article 2.1.9.2., all aquatic animal products.
- 2. When authorising import or transit of the *commodities*, of a species listed in Article 2.1.9.2., other than those listed in paragraph 1 of Article 2.1.9.3., *Competent Authorities* should require the conditions prescribed in Articles 2.1.9.7. to 2.1.9.11. of this Chapter, relevant to the ISA status of the *exporting country*, *zone* or *compartment*.
- 3. When considering the import or transit of any live *commodity* of a species not listed in Article 2.1.9.2. from an *exporting country*, *zone* or *compartment* not declared free of ISA, *Competent Authorities* of the *importing country* should conduct an analysis of the risk of introduction, establishment and spread of ISAV, and the potential consequences, associated with importation of the *commodity*, prior to a decision. The outcome of this assessment should be made available to the *exporting country*.

Article 2.1.9.4.

ISA free country

A country may declare itself free from ISA if it meets the conditions in points 1), 2), 3) or 4) below.

If a country shares a *zone* or *compartment* with one or more other countries, it can only declare itself an ISA free country if all the areas covered by the shared water are declared ISA free countries or zones (see Article 2.1.9.5.).

1. A country where none of the species listed in Article 2.1.9.2. is present may declare itself free from ISA when *basic biosecurity conditions* have been met continuously in the country for at least the past 2 years.

OR

2. A country where the species listed in Article 2.1.9.2. are present but there has never been any observed occurrence of the disease for at least the past 25 years despite conditions that are conducive to its clinical expression, as *described* in Chapter X.X.X. of the *Aquatic Manual*, may declare itself free from ISA when *basic biosecurity conditions* have been met continuously in the country for at least the past 10 years.

OR

- 3. A country where the last observed occurrence of the disease was within the past 25 years or where the infection status prior to *targeted surveillance* was unknown, for example because of the absence of conditions conducive to clinical expression, as described in Chapter X.X.X. of the *Aquatic Manual*, may declare itself free from ISA when:
 - a) basic biosecurity conditions have been met continuously for at least the past 2 years; and
 - b) targeted surveillance as described in Chapters 1.1.4. and X.X.X. of the Aquatic Manual has been in place for at least the last 2 years without detection of ISAV.

- 4. A country that had declared itself free from ISA but in which the disease is detected may not declare itself free from ISA again until the following conditions have been met:
 - a) on detection of the disease, the affected area was declared an *infected zone* and a *buffer zone* was established; and
 - b) infected populations have been safely destroyed or removed from the *infected zone* by means that minimise the risk of further spread of the disease, and the appropriate *disinfection* procedures (see *Aquatic Manual*) have been completed; and
 - c) targeted surveillance, as described in Chapters 1.1.4. and X.X.X. of the Aquatic Manual, has been in place for at least the last 2 years without detection of ISAV.

In the meantime, other areas of the remaining *territory* may be declared one or more free zones, provided that they meet the conditions in point 3) of Article 2.1.9.5.

Article 2.1.9.5.

ISA free zone or free compartment

A zone or compartment within the territory of one or more countries not declared free from ISA may be declared free by the Competent Authority(ies) of the country(ies) concerned, if the zone or compartment meets the conditions referred to in points 1), 2), 3) or 4) below.

If a zone or compartment extends over more than one country, it can only be declared an ISA free zone or compartment if all the Competent Authorities confirm that the conditions have been met.

1. A zone or compartment where none of the species listed in Article 2.1.9.2. is present may declare itself free from ISA when basic biosecurity conditions have been met continuously in the zone or compartment for at least the past 2 years.

OR

2. A zone or compartment where the species listed in Article 2.1.9.2. are present but there has never been any observed occurrence of the disease for at least the past 25 years despite conditions that are conducive to its clinical expression, as described in Chapter X.X.X. of the Aquatic Manual, may declare itself free from ISA when basic biosecurity conditions have been met continuously in the zone or compartment for at least the past 10 years.

OR

- 3. A zone or compartment where the last observed occurrence of the disease was within the past 25 years or where the infection status prior to targeted surveillance was unknown, for example because of the absence of conditions conducive to clinical expression, as described in Chapter X.X.X. of the Aquatic Manual, may declare itself free from ISA when:
 - a) basic biosecurity conditions have been met continuously for at least the past 2 years; and
 - b) targeted surveillance as described in Chapters 1.1.4. and X.X.X. of the Aquatic Manual has been in place for at least the last 2 years without detection of ISAV.

- 4. A *zone* previously declared free from ISA but in which the disease is detected may not be declared free from ISA again until the following conditions have been met:
 - a) on detection of the disease, the affected area was declared an *infected zone* and a *buffer zone* was established; and
 - b) infected populations have been safely destroyed or removed from the *infected zone* by means that minimise the risk of further spread of the disease, and the appropriate *disinfection* procedures (see *Aquatic Manual*) have been completed; and
 - c) targeted surveillance, as described in Chapters 1.1.4. and X.X.X. of the Aquatic Manual, has been in place for at least the last 2 years without detection of ISAV.

Article 2.1.9.6.

Maintenance of free status

A country or *zone* or *compartment* that is declared free from ISA following the provisions of points 1) or 2) of Articles 2.1.9.4. or 2.1.9.5., respectively, may maintain its status as ISA free provided that *basic biosecurity conditions* are continuously maintained.

A country or *zone* or *compartment* that is declared free from ISA following the provisions of point 3) of Articles 2.1.9.4. or 2.1.9.5., respectively, may discontinue *targeted surveillance* and maintain its status as ISA free provided that conditions that are conducive to clinical expression of ISA, as described in Chapter X.X.X. of the *Aquatic Manual*, exist and *basic biosecurity conditions* are continuously maintained.

However, for declared free *zones* or *compartments* in infected countries and in all cases where conditions are not conducive to clinical expression of ISA, *targeted surveillance* needs to be continued at a level determined by the *Competent Authority* on the basis of the likelihood of reinfection.

Article 2.1.9.7.

Importation of live animals from a country, zone or compartment declared free from ISA

When importing live aquatic animals of the species listed in Article 2.1.9.2., other than commodities listed in point 1) of Article 2.1.9.3., from a country, zone or compartment declared free from ISA, the Competent Authority of the importing country should require an international aquatic animal health certificate issued by the Competent Authority of the exporting country or a certifying official approved by the importing country, certifying that, on the basis of the procedures described in Articles 2.1.9.4. or 2.1.9.5. (as applicable), the place of production of the consignment is a country, zone or compartment declared free from ISA.

The certificate shall be in accordance with the Model Certificate in Appendix 6.1.1..

Article 2.1.9.8.

Importation of live animals for aquaculture from a country, zone or compartment not declared free from ISA

When importing, for aquaculture, aquatic animals of the species listed in Article 2.1.9.2., other than those commodities listed in point 1) of Article 2.1.9.3., from a country, zone or compartment not declared free from ISA, the Competent Authority of the importing country should assess the risk and apply risk mitigation measures such as:

- 1. the consignment is delivered directly into and held in quarantine facilities; and
- 2. the imported *aquatic animals* and their first generation progeny are continuously isolated from the local environment; and
- 3. all effluent and waste material are treated in a manner that ensures inactivation of ISAV.

Article 2.1.9.9.

Importation of live animals for processing for human consumption from a country, zone or compartment not declared free from ISA

When importing, for processing for human consumption, *aquatic animals* of the species listed in Article 2.1.9.2., other than any live *commodities* listed in paragraph 1) of Article 2.1.9.3., from a country, *zone* or *compartment* not declared free from ISA, the *Competent Authority* of the *importing country* should require:

- 1. the consignment is delivered directly to and held in *quarantine* facilities for slaughter and processing to one of the products listed in paragraph 1 of Article 2.1.9.3. or other products authorised by the competent authority; and
- all effluent and waste material are treated in a manner that ensures inactivation of ISAV.

Article 2.1.9.9.bis

Importation of live animals intended for use in animal feed, or for agricultural, industrial or pharmaceutical use from a country, zone or compartment not declared free from ISA

When importing, for use in animal feed, or for agricultural, industrial or pharmaceutical use, *aquatic animals* of the species listed in Article 2.1.9.2., other than any live *commodities* listed in paragraph 1) of Article 2.1.9.3., from a country, *zone* or *compartment* not declared free from ISA, the *Competent Authority* of the *importing country* should require:

- 1. the consignment is delivered directly to and held in *quarantine* facilities for slaughter and processing to products authorised by the competent authority; and
- 2. all effluent and waste material are treated in a manner that ensures inactivation of ISAV.

Article 2.1.9.10.

Importation of products from a country, zone or compartment declared freeImportation of products from a country, zone or compartment declared free from ISA

When importing aquatic animal products of the species listed in Article 2.1.9.2., other than those commodities listed in point 1) of Article 2.1.9.3., from a country, zone or compartment free from ISA, the Competent Authority of the importing country should require an international aquatic animal health certificate issued by the Competent Authority of the exporting country or a certifying official approved by the importing country certifying that, on the basis of the procedures described in Articles 2.1.9.4. or 2.1.9.5. (as applicable), the place of production of the consignment is a country, zone or compartment declared free from ISA.

The certificate shall be in accordance with the Model Certificate in Appendix 6.2.1..

Article 2.1.9.11.

Importation of products from a country, zone or compartment not declared free from ISA

When importing aquatic animal products of the species listed in Article 2.1.9.2., other than those commodities listed in point 1) of Article 2.1.9.3., from a country, zone or compartment not declared free from ISA, the Competent Authority of the importing country should assess the risk and apply appropriate risk mitigation measures. In the case of dead fish, whether eviscerated or uneviscerated, such risk mitigation measures may include:

- a) the consignment is delivered directly to and held in biosecure/quarantine facilities for processing to one of the products listed in paragraph 1 of Article 2.1.9.3. or other products authorised by the competent authority; and
- b) all effluent and waste material are treated in a manner that ensures inactivation of ISAV.
